

The diagram below is an example only, the construction at the grounds will be built similar but may differ as g conditions dictate.

Journeyman Hurt Man Rescue: 40' Class 3 poles will be framed as follows:

- Single phase primary Double Dead End in the 5' hole from the top of the pole (4KV)
- Closed disconnect on a switch bracket located 40' from the Dead-End Bells on the opposite side of the pole from the neutral.
- A shotgun stick will be locked in the eye of the line side disconnect hot line clamp.
- Hand line is hung on the back-side switch bracket on the same side of the pole as the neutral and block must remain there during rescue
- Neutral conductor will be located 64' below switch bracket.
- Mannequin will be hung just above the neutral, on the same side of the pole as the neutral.
- There will be a mark on the pole 6' above the ground level for climbing purposes.
